

PINSSAR

Supporting world class projects can be risky business

When it comes to risks associated with diesel emissions, Pinssar is the only practical solution for managing your diesel emissions strategy.

Pinssar has developed an award winning solution which reliably monitors diesel emissions and provides continuous real-time air quality data.

“This globally recognised system delivers consistent insights to enable you to manage risks associated with diesel emissions in your underground environments.”

Protecting People

Diesel emissions are a significant risk to people. Exposure to high concentrations can have safety ramifications and long-term exposure can lead to severe health issues, such as cancer in the lungs and primary organs.

Pinssar offers the only practical solution for managing your diesel emissions strategy to reduce exposure to a deadly Group 1 carcinogen.

The insights provided from the Pinssar system can also:

- Help support the goal of zero harm.
- Provide data to help reduce diesel emissions exposure not only to the workforce, but also to the local community.
- Create certainty around emission data to support social licence and community acceptance.
- Demonstrate the importance the company places on employee health and safety.
- Ensure a healthy workplace, enabling you to be an employer of first choice for skilled workers.

Protecting your Leadership

Without reliable diesel emissions data, how can businesses improve health and safety outcomes? Instill complete confidence across the entire organisation when it comes to protecting colleagues from diesel emissions.

Pinssar provides a proven, ultra-low maintenance and reliable solution for monitoring diesel emissions in continuous, real-time to enable data driven decisions for the Leadership team.

By recommending the Pinssar system, you will :

- Create certainty and credibility when reporting diesel emissions data up-line.
- Progress your organisation by enabling better informed decisions.
- Implement proven systems that create long-term, reliable solutions in harsh underground environments.
- Ensure positive adoption based on easy implementation, simple operation and low maintenance requirements.

Pinssar offers the only proven technology which meets the recommendations of the British Standard 6164 Code of Practice.

Protecting your Reputation

Diesel emissions can have a severe impact on the reputation of the project.

Protect your reputation by putting health at the top of your agenda. Our globally recognised monitoring system provides data-driven insights for future-safe decision making and healthier work environments.

The insights provided from the Pinssar system can be used to:

- Comply with industry standard BS 6164 Code of Practice.
- Provide certainty around emission data to support social licence and positive publicity.
- Utilise data to communicate proactive messages about your health environment to the workforce.
- Protect your community and be recognised for building a healthier project.
